Welcome to the Planetary Surface Portal (PSUP)

This facility involves a data processing center coupled with planetary surface data dissemination center (mineralogical maps, geomorphologic maps, DTM...). Planetary Surface Portal is an initiative from OSUPS and OSUL. You can:

- Browse the catalog in the right window "datasets".
- Visualize in 2D or 3D the datasets with the module "Mars Visu" (🗺️).
- Process DTM and other planetary datasets from the module "MarsSi" (🔧).
- Download the data and additional information from any modules (📁 Downloads).

The database will be updated regularly to include new observations, new redshift estimates and new relevant information. You are encouraged to Register to the RSS 📡 to be kept up to date on new releases.

User's Manual

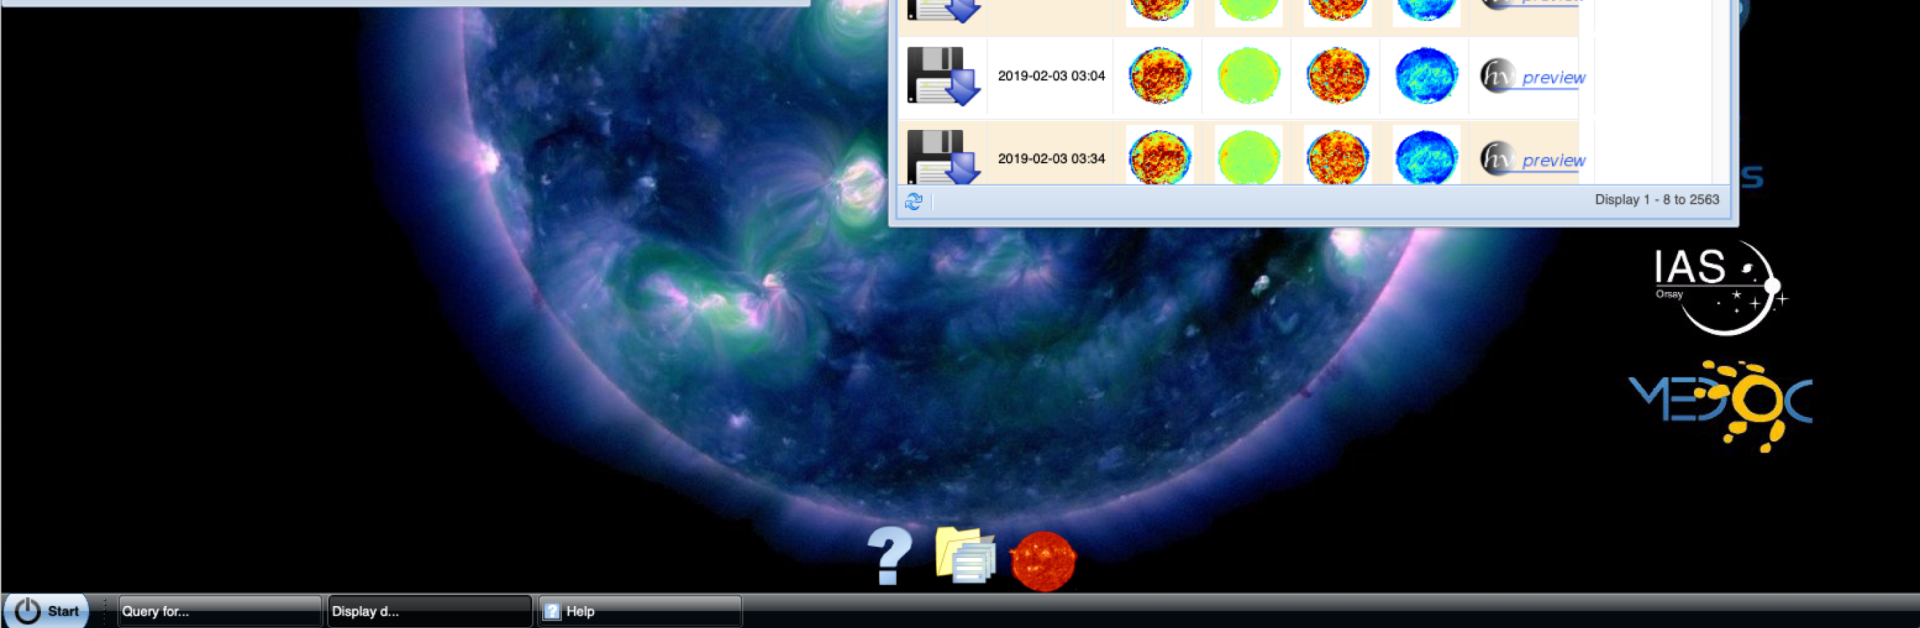

1 Overview

Welcome to the IAS web interface to the local AIA/SDO DEM maps.

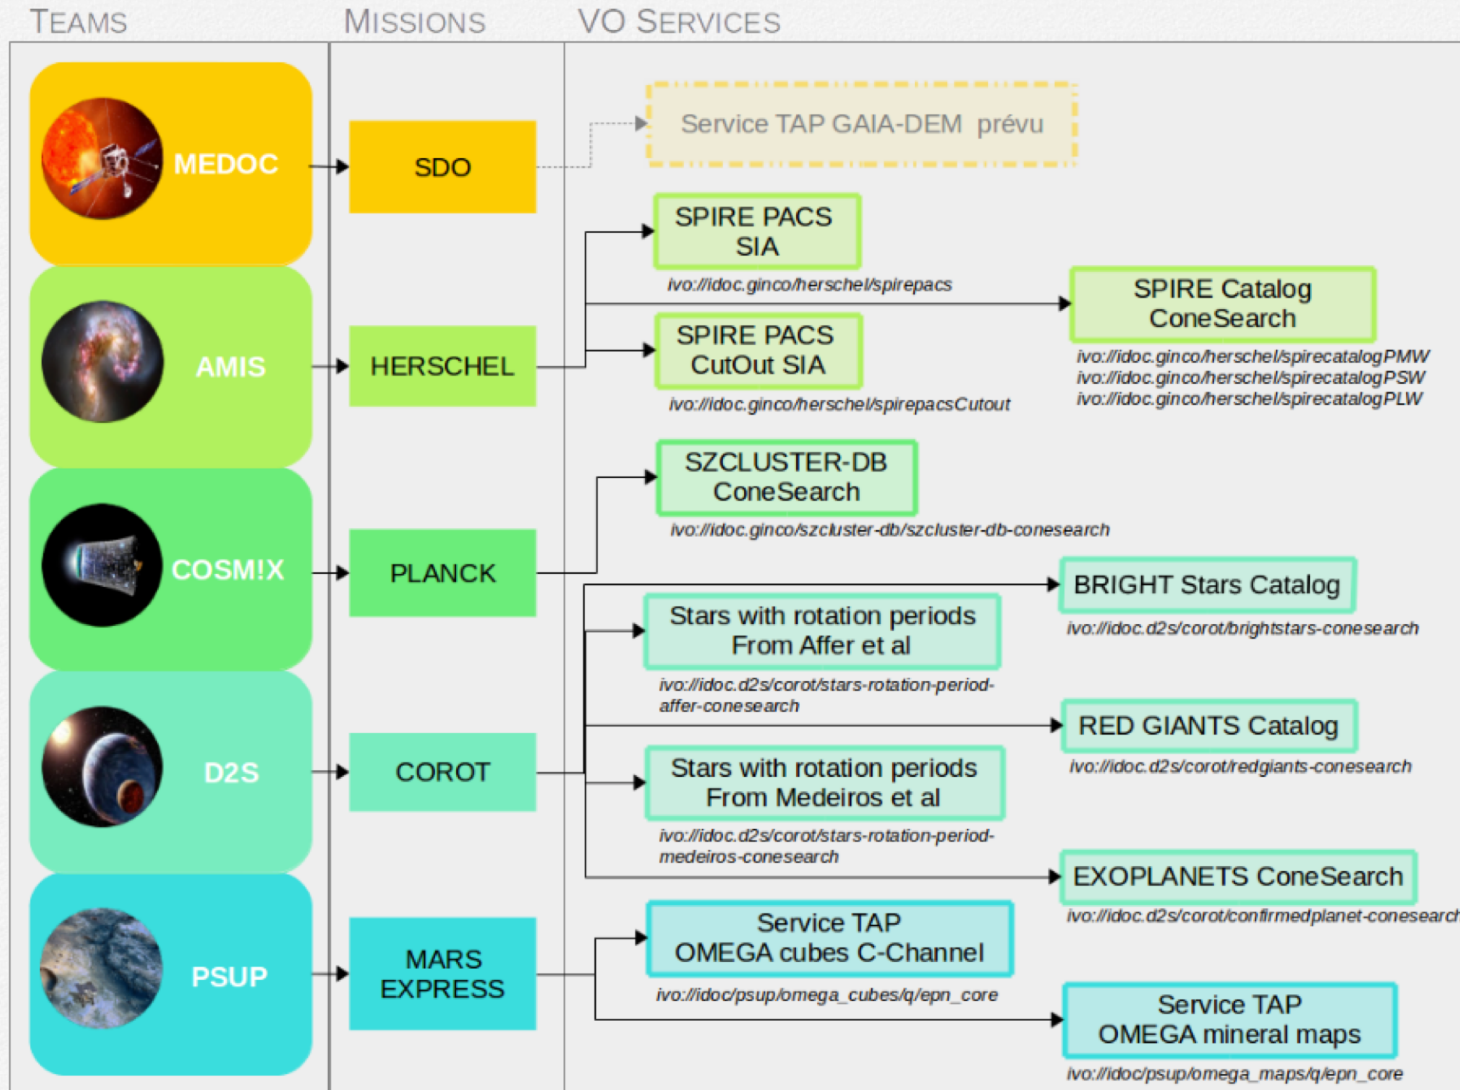

This archive is hosted by MEDOC and provides to the solar community Quick look AIA/SDO DEM maps at a 3 hours cadence. The corresponding FITS files can be downloaded starting from 2010/05/13.

DaCHS rappel

<https://dachs-doc.readthedocs.io>

GAVO DaCHS

Author: Markus Demleitner

Email: gavo@ari.uni-heidelberg.de

Date: 2019-03-04

The GAVO Data Center Helper Suite (DaCHS) is a publishing infrastructure for the Virtual Observatory, including a flexible component for ingesting and mapping data, integrated metadata handling with a publishing registry, and support for many VO protocols and standards.

*** PSUP Omega Maps ***
```

PSUP Omega Mineral maps are OMEGA-based NIR albedo, Ferric BD530, Olivine SP1, SP2, SP3, Pyroxene and water BD maps.

OMEGA is the spectro-imaging instrument of the ESA Mars-Express mission, inserted on the martian orbit the 25th of December 2003.

The Observatories of Paris Sud (OSUPS) and Lyon (OSUL) have implemented a portal, called PSUP (Planetary Surface Portal), for providing users with efficient and easy access to data products dedica

Warning

You are probably using an incompatible spacial reference (planets vs sky). This incompatibility is ignored in this beta release (test phase)

Tips & tricks

Contrôle du rendu des pixels:

Astuce: le rendu des pixels peut être ajusté directement dans la fenêtre principale par un simple cliqué/étiré avec le bouton de droite de la souris. Le déplacement du curseur détermine le contraste et la luminosité de la table des couleurs (à la "DS9").

A noter également le bouton **hdr** dans la fenêtre principale qui permet de **passer du mode** ...

24588° x 3168°

- / +

- Une ligne par type de données. Utilisation de datalink déconseillée pour le moment
- Limitation de la taille de la database avec la méthode utilisée
- Gestion base dynamique pas directe

odbcGrammar ?

- Rapide à mettre en place
- Utilisation de python
- Enregistrement simple
- Support réactif

Merci pour votre attention !
